

I build AI that extends people instead of replacing them: features your users actually touch, and the full-stack and integration work that has to be solid underneath. Five years shipping production software, the last two leading the integration platform at a fintech SaaS company, where the job was taking partner data in every shape imaginable and making it boring. **The AI should feel like a sharp coworker, and when it isn't sure, a person gets the final say.**

WHAT I DO

AI products

AI features end users touch: assistants grounded in your own data, AI reviewers and judges with a human override, and evaluation so quality is measured instead of hoped for.

Agents and AI platforms

LLMs that take real actions: tool calling, MCP servers, agent skill files and multi-agent systems, wired into your existing APIs. Claude and Azure OpenAI.

Full-stack, integrations, cloud

React, Angular and TypeScript on Node or .NET Core; multi-tenant data integrations; Azure serverless, IaC and CI/CD; WCAG AA built in rather than bolted on.

PAST PERFORMANCE

- Fintech SaaS company · Software Engineer**

Sept 2024 to present · remote
- Led an internal integration builder for non-engineers. Started file-based (CSV and Excel mapping), then architected the expansion to API integrations on serverless workflows.
 - Moved dozens of integration requests from "needs engineering" to self-serve; partner onboarding went from weeks to days.
 - Built ephemeral QA environments, drove Git Flow adoption, split CI/CD into pre- and post-merge stages, and reduced local setup to one command. Led code review for a team that included offshore contractors.
- Limeade (now WebMD Health Services) · Software Developer 2, Developer, IT Specialist**

Mar 2020 to Sept 2024
- Built a new internal admin dashboard with UX and product; championed the PrimeReact design system, cutting design and build time across teams.
 - Refactored a .NET Core microservice that sped up an internal tool's load time by 75% or more.
 - Architected a content integration tool that helped land one of the company's largest customers on a hard deadline. Promoted from IT to engineering, then to Developer 2 in eight months.

AI WORK I'VE BUILT

Products

- Ask Axiom** Grounded chat assistant (RAG). When it doesn't know, it asks me instead of guessing. [chase.skibeness.com](#)
- Content curation reviewer** Rules-based triage, then an LLM judge with a live review UI that learns from the curator's overrides. [demo on request](#)
- AI-based complex decision-making engine** Rules on situations no hand-written rules engine anticipated, and keeps past rulings as precedent. [demo on request](#)

Agents and tooling

- Organization-wide AI orchestration system** Coordinates a team's AI coding sessions and warns before two collide on the same files. v1.3.2, with CI. [GitHub](#)
- MCP servers** Doc servers for the Godot and FreeCAD APIs, plus a desktop companion app driven by its own MCP server. [GitHub](#)
- Claude Code plugins** Self-learning QA (claudity-assurance) and multi-project dispatch (open-workshop). [GitHub](#)
- Multi-agent text RPG** A "federated brain" of specialized agents that runs a shared multiplayer world on a Convex state store. [demo on request](#)
